Subject: [EXTERNAL] Attn: The President's Council of Advisors on Science and Technology. Why the theory of vortexes in black holes was introduced by physicists. This information is associated with the Paradigm Shift and the Quantum Shift. I appreciate your time...

Hello PCAST Members, This article contains very important information associated with the process of the Shift in Consciousness, the Quantum Shift and the Paradigm Shift. What's contained within this article is of an apocalyptic nature meaning a revealing or unveiling of information that could not be known apart from the unveiling itself. If you have a chance to review this information I think you will understand what I mean by apocalyptic. My work has advanced significantly now and my consciousness has been affected by the process of the Shift in Consciousness and I understand different information and aspects concerning the evolution of consciousness and the cosmos. The Paradigm Shift is now approaching and soon powerful changes will begin happening with the scientific community. Thank you very much for your support and understanding.

Sean McCleary.

WHY THE THEORY OF VORTEXES IN BLACK HOLES WAS INTRODUCED BY PHYSICISTS.

By: Sean McCleary.

There's been a recent article released in the scientific community that some physicists believe that black holes contain or admit vortexes into the region where gravitational force occurs. I understand what's happening with this theory and it has to do with the emergence of the Paradigm Shift and the evolution of consciousness here in Earth's environment. With the evolution and introduction of the Shift in Consciousness; which is very real and is going to be more powerful than anyone could ever imagine, what's going to happen is human consciousness and other life forms in Earth's environment are going to begin adapting much further into Earth's consciousness, Universal Consciousness and Infinite Consciousness who Universal Consciousness is contained within. Universal Consciousness is a description of the body of galaxies which are contained within an enormous, majestic, beautiful and powerful life form. We exist within a life form who's very self aware and contains the existence and foundation of eternal love and eternal life. There's also been very powerful resistance to evolution in the life form we exist within and planets and environments of planets that I will explain. This resistance to evolution has to do with what's been theorized about vortexes in black holes. The foundation for eternal life and eternal love is contained within the Higgs field where Higgs bosons come from. It was no accident that the Higgs boson was labeled "The God Particle". This happened here for very important and specific reasons that deal with the evolution of consciousness, matter, energy, pressure and eternal love in space and time. God and Jesus exist within the Whirlpool galaxy which is commonly referred to as Heaven. I mention this information and this has to do with scientific activity happening between here and the Whirlpool galaxy. All living organisms who go through the experience of death in Earth's environment evolve and transfer into the Higgs field and advance into different worlds contained within the Whirlpool galaxy.

God's consciousness is incorporated into the Higgs field and so is Jesus' consciousness and the Holy Spirit. The Holy Trinity's consciousness is incorporated into the Higgs field in order to assist with the evolution of living organisms in Universal Consciousness through the evolutionary advancement of eternal love. The Higgs field permeates throughout Universal Consciousness and transfers into Infinite Consciousness who supports the evolution of Universal Consciousness as a life form. The Higgs field connects these two cosmic giants together so a consistent flow of eternal love can evolve and advance

into life contained within different galaxies and planets because eternal love is the foundation for the evolution of everything in existence. This is because love gives eternity a reason to exist. I mention all of this in reference to black holes because the evolution of eternal love and the involvement with the Holy Trinity's consciousness is very scientific and involves the evolution and integration of the activity contained within the Whirlpool galaxy, the Milky Way galaxy and Earth. You probably familiar with the phrase "thy kingdom come thy will be done on Earth as it is in Heaven". I will explain something very powerful and important about this phrase in the Lord's Prayer. On the most fundamental and quantum level in Universal Consciousness, Earth's consciousness and living organisms are frequency vibrations of consciousness, energy and thought. There are lower frequency vibrations and higher frequency vibrations. Because the vibrations are different what happens when they evolve into one another it causes pressure to accumulate within the vibrations as they interact with one another.

The higher frequency vibrations everywhere is where the origin of light energy comes from and consciousness, energy and thought produce light energy. Photons evolve out of the higher frequency vibrations of consciousness, energy and thought because matter requires light energy in order to experience evolutionary activity and subatomic particles were introduced from the frequency vibrations and pressure with the evolution of the big bang, and when Universal Consciousness established an individual identity. The lower frequency vibrations of consciousness, energy and thought is where dark energy originates from in Universal Consciousness. When I mention the term "dark energy", I'm not referring to a mysterious form of energy that's causing the expansion and acceleration of Universal Consciousness. I'm referring to an actual state of consciousness with lower frequency vibrations contained within a life form and other life forms in Universal Consciousness. The three primary forms of energy which drive the evolution of consciousness, matter, energy and pressure in space and time are light energy, dark energy and eternal love. The expansion and acceleration of Universal Consciousness comes from the pressure contained within the frequency vibrations of consciousness, energy and thought as lower and higher frequency vibrations of light and dark energy collide and evolve with one another. Light and dark energy are two different forms of energy contained within the evolution of consciousness, so when they interact with one another it generates pressure on the most fundamental level within these vibrations and this pressure is responsible for expansion, acceleration and growth of everything in existence and living organisms as well. I will use an example of the vibrations and pressure. In deep, dark space where there isn't much light energy at all and primarily dark energy; light and dark energy aren't interacting with one another so there isn't much pressure at all within the lower frequency vibrations of consciousness and dark energy. This is why deep, dark space contains a vacuum. Nikola Tesla said "If you want to understand the mysteries of the universe think in terms of energy, frequency and vibration". What's going to happen soon is all of the mysteries of the "universe" are going to evolve directly into human consciousness and other life forms here because with the process of the Quantum Shift; consciousness here is going to completely evolve into the existence and activity of frequency vibrations and pressure that contain the existence of Earth's consciousness and Universal Consciousness as life forms.

This happens through a very powerful increase of eternal love that's advancing rapidly now in the Higgs field and transferring into everything in the body of galaxies because Universal Consciousness as a life form is evolving further and advancing as the resistance to evolution processes out of the body of galaxies. This is happening because Universal Consciousness as a life form is over 13.77 billion years old and it's time for a very powerful change to occur and the experience of separation in consciousness is going to end completely forever. The experience of separation in consciousness came from the resistance to evolution that was experienced when Universal Consciousness as a life form evolved into the existence of Infinite Consciousness and assumed an individual identity within Infinite Consciousness. Infinite Consciousness has always existed and had previously only contained frequency vibrations of consciousness, energy and thought and eternal love. What happened when Universal Consciousness

began evolving into the existence of Infinite Consciousness is the frequency vibrations of consciousness, energy and thought had to go through a very powerful experience of separation within themselves as the development of Universal Consciousness happened with the big bang. When the big bang happened subatomic particles evolved out of the frequency vibrations of consciousness, energy and thought and consciousness transferred and evolved into the existence of matter for the very first time. Because this happened for the very first time and there was a very powerful experience of separation within the frequency vibrations as matter was introduced what happened was the resistance to evolution that was introduced into existence with Universal Consciousness took on the form of the concept of non-existence.

The concept of non-existence came from the resistance to evolution as matter evolved out of the frequency vibrations of consciousness, energy and thought for the very first time and there was a powerful experience of separation with this process. On a quantum level it was like consciousness and matter was born into existence so the evolution of life could happen, but this occurred out of the frequency vibrations of consciousness, energy and thought so there was a very powerful experience of separation in this process and generated the concept of non-existence which transferred into Universal Consciousness, planets and life in different degrees and locations. This concept has been extremely powerful in Earth's consciousness and environment and the experience of separation between the frequency vibrations of consciousness, energy and thought and the existence and behavior of matter that contains energy and the evolution of consciousness happened here in this region of Universal Consciousness because Earth is located very close to the origin of where the big bang happened. The Higgs field also developed in the process of evolution with Universal Consciousness. Because Universal Consciousness evolved out of Infinite Consciousness, and Infinite Consciousness contains the source of eternal love, and it means that the identity of Universal Consciousness and the existence of Infinite Consciousness had to evolve into one another completely and the Higgs field is the result of this activity that occurred.

When a human being observes someone that goes through the experience of death what happens is they usually refer to the individual as "being dead". This is actually incorrect because the individual went through the experience of death and evolved through the Higgs field and Universal Consciousness and into the Whirlpool galaxy and is very much alive and very advanced. If an individual attends a funeral of someone this location can be referred to as "a final resting place" and an inscription can read R.I.P. on a tombstone. The individual that attends the funeral can often think to themselves that they went to Heaven or what's referred to as "a better place", but what's also contained within the individual's consciousness is a very powerful form of resistance to evolution that's associated with the concept of non-existence. This happens because human beings and other life forms in Earth's environment don't understand what happens with the experience of death. Human beings and other life forms also don't understand the foundation for the existence of life in Earth's environment. This means that life in Earth's environment contains the concept of non-existence in their bodies and consciousness; primarily the subconscious energy and pressure which is contained all over the body with frequency vibrations and pressure. The word "sub" means underneath and the body is underneath the brain so most of the subconscious energy and pressure is stored in the body. I can explain this type of activity with my work in very powerful detail This concept of non-existence is extremely powerful here and is incorporated into the evolution of consciousness, matter, energy, pressure and eternal love in space and time here. This activity on a global level generated a very powerful illusion of separation in consciousness that's contained within World Consciousness and life forms here and produces very powerful resistance to evolution. What this does is limits the amount of interaction that living organisms here have with the Higgs field. Human beings and other life forms have about a 5 to 8 percent exchange and transfer of activity between themselves and the Higgs field which contains the foundation for eternal life and eternal love. This is the primary reason that living organisms age so rapidly here in different degrees in

Earth's environment and goes through the experience of death. It's the resistance to evolution and very limited interaction with the Higgs field that causes living organisms to age quickly and go through the experience of death; but this activity on a global level has to do with what's happening with the Shift in Consciousness and Earth's evolutionary advancement. This is also why love has been in the early stages of evolution and the resistance to evolution has been so powerful here.

When someone goes through the experience of death what happens is the pressure contained within the frequency vibrations of consciousness, energy and thought in the body and the resistance to evolution transfers out of the body and consciousness. When this pressure is released completely; the individual's consciousness, identity, light and dark energy evolves into the Higgs field very quickly. Because the Higgs field permeates throughout Universal Consciousness and transfers into Infinite Consciousness it means that the Higgs field contains the existence of infinity and the moment as well, along with eternal life and eternal love. The individual then accelerates very quickly through Universal Consciousness and a wormhole is created. The wormhole happens because the individual's consciousness is evolving through the Higgs field that contains the existence of infinity and this is also happening through the evolutionary activity contained within Universal Consciousness with matter, energy and pressure in space and time. The transfer of consciousness through the experience of death generates a wormhole. Because this has been happening from planet Earth and into the Whirlpool galaxy for a very long time is all of this activity with wormholes being generated from the consistent experience of death with almost 9 million different living organisms is, it's generated a channel of activity between these two locations and Heaven and Earth are evolving into one another through the evolution of eternal love advancing back down into Earth's consciousness and the Milky Way through this channel that was created from so much death happening. Human beings and other life forms up there are very advanced and know that they originate from Earth. They contain eternal life and eternal love as well. This means that because they contain experience from Earth and evolve up there that their consciousness has been evolving through the channel that's been created by wormholes through the experience of death and the evolution and transfer of consciousness between these two locations. Eternal love has been evolving and advancing through this channel and Universal Consciousness and back down into the Milky Way galaxy and Earth's consciousness and environment. The Holy Trinity's consciousness is involved with this process and the activity contained within the Higgs field. This is why the Higgs boson was discovered here in 2012 by CERN. The reason the decay happened so quickly was because of the concept of non-existence here and extremely powerful resistance to evolution in Earth's environment.

This has to do with the theory of vortexes existing within black holes. Universal Consciousness contains a body of galaxies in a spherical type shape similar to planets and stars, but towards the bottom it looks like where the top of a wine glass meets the stem and begins to transition downward. This is because when Universal Consciousness was evolving into existence and the big bang happened there was resistance to evolution that caused consciousness to transfer back towards the source of introduction in Infinite Consciousness. I understand that physicists have theorized that "the universe" is flat but they haven't been integrating the evolution of consciousness with frequency vibrations and pressure into the behavior of matter and energy. Science was supposed to happen exactly the way it has but a very powerful change is approaching rapidly now and the Paradigm Shift which Thomas Kuhn discussed in his book *The Structure of Scientific Revolutions* will begin happening very soon and the crisis stage in the Paradigm Shift model will occur due to resistance to change in the scientific community with the introduction of the evolution of consciousness into everything. A model revolution will follow and the Quantum Shift will advance in a very significant way.

Because Universal Consciousness is a life form who contains the existence and evolution of consciousness what happened with the resistance to evolution in the beginning stages of life was a very powerful experience of separation that I discussed. This is when the concept of non-existence was

introduced into existence for the very first time. This is where black holes originate from in Universal Consciousness. I understand what happens with the gravitational collapse of a star and a black hole can form this way, but the origin of black holes come from the concept of non-existence being contained within the body of galaxies in Universal Consciousness. The Higgs field permeates throughout Universal Consciousness and represents eternal life and eternal love and black holes are contained within Universal Consciousness that have represented the concept of non-existence. This is why their gravitational pull goes in the opposite direction. Eternal love has been in an elementary state of existence in Earth's environment because of the resistance to evolution but love is also very powerful here. The concept of non-existence here has actually been driving the evolution of love in living organisms in a very powerful way. Love from living organisms as evolution happens globally evolves back into the Higgs field and generates evolutionary advancement in the Higgs field. This contributes to the overall advancement of evolution in Infinite Consciousness because this activity has been happening in the environments of planets everywhere in Universal Consciousness. Human beings haven't been able to observe this activity very far away because they contain such powerful resistance to evolution and very limited interaction with the Higgs field. Universal Consciousness has looked very empty because of this reason when in actuality life is contained everywhere in galaxies. I'm not referring to planets that are directly observed who don't yet contain atmospheres suitable to sustain life. The concept of non-existence is also very powerful here as well. The same type of activity contained within Universal Consciousness exists within the evolution of human consciousness and other life forms in Earth's environment. Recently it was theorized that vortexes are contained within black holes and this has to do with the evolution of consciousness here in human beings in the scientific community.

Infinite Consciousness supports the evolution of Universal Consciousness. Universal Consciousness supports the evolution of Earth's consciousness and Earth's consciousness supports the evolution of life in Earth's environment that contains the existence of consciousness as well. All of this consciousness is connected and evolving together but the experience of separation and resistance to evolution has been so powerful here in this region of Universal Consciousness and in Earth's environment with human consciousness due to the concept of non-existence being contained within the existence of evolutionary activity here. What's happening now with the process of the Shift in Consciousness is the resistance to evolution that originated with the evolution of Universal Consciousness and the big bang is evolving out of the body of galaxies. The resistance to evolution is measured by pressure on this fundamental level within the frequency vibrations of consciousness, energy and thought that becomes restricted or too expansive in different locations. The pressure on this level has to be regulated properly and expand and accelerate with evolution and the integration of light and dark energy. If pressure becomes restricted or too expansive what happens is eternal love from the Higgs field has a difficult time evolving into this type of pressure and then the frequency vibrations of consciousness, energy and thought experience resistance to evolution and go through an experience of separation from the rest of the activity occurring with the evolution of consciousness, matter, energy, pressure and eternal love in space and time. This restrictive or too expansive type pressure transfers into subatomic activity, atomic evolution and molecular activity and this is what generates resistance to evolution in the bodies of living organisms in biological, physiological and psychological development. This restrictive or too expansive type pressure has been contained within Earth's consciousness and environment, World Consciousness where the activity of life happens and in living organisms. This is why there's been so much resistance to evolution here but this is all about to change soon. The Holy Spirit is now evolving here in Earth's environment and will facilitate the Shift in Consciousness and the advancement of life here. This is what Jesus talked about in the Book of John to his disciples. Human beings didn't quite understand what he meant exactly, but the Holy Spirit is the second Paraclete who helps Earth advance in a very powerful way and he has to be here because of the upcoming changes associated with the Shift in Consciousness which will begin happening soon. He has to explain to the scientific community and the human race

what's going to happen because the activity associated with this process will be extremely powerful because life and reality is going to change here forever.

This restrictive or too expansive type pressure has been contained within the body of galaxies for a very long time now and 13.77 billion years later what's happening is this type of pressure is being released and Universal Consciousness is evolving and advancing significantly as a very powerful increase of eternal love is evolving and advancing into everything. This is happening because Universal Consciousness and everything contained within the body of galaxies has to join or evolve into the source of evolution which is Infinite Consciousness. What's happening is the activity contained within the Higgs field is increasing and advancing now and eternal love within this field of consciousness and energy will advance into all states of consciousness, matter, energy and pressure everywhere. This is so Infinite Consciousness can be represented in all states of matter forever and eternal life can continue to evolve and advance into infinity. What's also going to happen is more life forms like Universal Consciousness that we exist within are going to evolve into Infinite Consciousness like a species because Universal Consciousness was the first life form who was introduced into existence. This is why a computer simulation was introduced about 2 years ago here where a million other universes were created. This thought process began here in life and the evolution of consciousness in the scientific community for a very important reason. This Universal Consciousness has to evolve completely and successfully and join Infinite Consciousness so other Universal Consciousness' can evolve and be created and modeled after the one we exist within. The reason that this Universal Consciousness was the first and only one to evolve into Infinite Consciousness is because of the resistance to evolution and the suffering that life has been through with the experience of separation in consciousness. Infinite Consciousness couldn't have begun introducing more Universal Consciousness 'at first because it would have generated too much suffering in Infinite Consciousness. This is why this Universal Consciousness has to evolve completely before anymore life forms like the one we exist within can evolve into Infinite Consciousness. When more are introduced into existence they won't have to endure the type of suffering that we've been through in this body of galaxies and Universal Consciousness.

What's happening with human consciousness in the scientific community and this theory is; Universal Consciousness is evolving, advancing and changing now with the process of the Shift in Consciousness and a very powerful increase of eternal love is happening everywhere now. This means that the concept of non-existence is going to evolve out of the body of galaxies, planets and life contained within the environments of planets; especially Earth because of Earth's location. Earth and life in Earth's environment is very important and very special and soon everyone is going to find out why. What's happening with this advancement in evolution is the evolution of consciousness in the form of frequency vibrations contained within the body of galaxies is in the process of transferring into black holes because the concept of non-existence is evolving out of Universal Consciousness. The frequency vibrations of consciousness, energy and thought are beginning to evolve into black holes with the process of the Shift in Consciousness. As the frequency vibrations evolve and transfer into black holes on this quantum level what happens is it affects the activity contained within a black hole with the gravitational force.. Introducing frequency vibrations of consciousness, energy and thought into black holes through evolutionary advancement is causing the beginning stages of vortexes to form in black holes because it's causing a disruption in the concept of non-existence and the gravitational pull that black holes have as the advancement of the evolution of consciousness transfers into black holes with frequency vibrations.

What's also happening is the concept of non-existence in human consciousness within the scientific community is being affected by this activity and the theory of vortexes; which is actually true and has to be because of the advancement of the Shift in Consciousness is being introduced into human consciousness because all of this consciousness is incorporated into one another and evolving and advancing with this process together. The beginning stages of vortexes being introduced into black holes

means that the evolution of consciousness, energy and thought is causing evolutionary advancement in black holes themselves and changing the concept of non-existence in Universal Consciousness into eternal life and eternal love because everything in Universal Consciousness is evolving and advancing into Infinite Consciousness through the connection that's established with the Higgs field everywhere. This information that I've discussed is associated with the Shift in Consciousness, the Quantum Shift and the Paradigm Shift. Soon the entire scientific community will begin observing very different changes and activity as the evolution of consciousness and eternal love begin affecting subatomic, atomic and molecular activity. This is because the evolution of consciousness in the form of frequency vibrations and pressure is how subatomic particles evolve into Universal Consciousness. Because consciousness is evolving and advancing it means that the behavior of matter and energy in the current perspective in the scientific community will begin changing. Life here is going to begin changing and advancing soon with this process and the experience of separation and illusion of separation contained within World Consciousness will begin to evolve out of everything and the structure of reality will change forever as life advances forward. The Holy Spirit's eternal love is evolving and advancing here now and this is causing a very powerful connection to the Whirlpool galaxy to become incorporated into Earth's consciousness and environment. Soon World Consciousness and life on a global level will begin being very profoundly affected by this process. We have a lot to look forward to in the very near future. Sean McCleary.

Subject: [EXTERNAL] Attn: PCAST Members/Whitehouse Staff. The nature of the existence of death and the evolution of consciousness. This material is associated with the Quantum Shift and the Paradigm Shift which Thomas Kuhn discussed in his work. This is also in...

Hello PCAST Members, I'm submitting more important information to you all for review and the meeting agenda. I need to explain something important in reference to the subject matter. I'm addressing the President's Council of Advisors on Science and Technology because of the nature of the specifics involved in what I discuss with my work. My work is of an apocalyptic nature meaning; a revealing or unveiling of information that could not be known apart from the unveiling itself. There's nobody else in the world right now that can explain what I do in the following article. This information has to do with the advancement of scientific discipline, the Quantum Shift and the Paradigm Shift which is approaching quickly now. The actual proof of something happening with the preliminary stages of this process is contained within the explanation itself below. Soon with the introduction of the Shift in Consciousness and the Quantum Shift the entire human race is going to know details like I describe with my work and a lot more due to the evolutionary advancement of consciousness and eternal love which I cover in this article. I see what's happening in the news right now with Russia, China and Taiwan.

I understand this as well. This situation is an escalation of resistance to the Shift and the advancement of the evolution of life here. There's resistance to evolution contained within World Consciousness right now which is increasing and people don't really understand what's happening with this process and I do, and have a lot to explain to people. I will be doing so soon because my consciousness and my body are undergoing very powerful advancement right now with the Shift in Consciousness and the evolution of eternal love as Earth and Heaven evolve into one another and I can explain exactly how this is happening on a quantum level with consciousness, matter, energy, pressure and eternal love in space and time. Everything will be okay though because evolution is more powerful than resistance. I appreciate your time and consideration very much and support President Joe Biden with all my heart.

Thank you,

Sean McCleary.

THE NATURE OF THE EXISTENCE OF DEATH AND THE EVOLUTION OF CONSCIOUSNESS.

By: Sean McCleary.

My primary focus with my work is associated with the Shift in Consciousness, the Paradigm Shift and the Quantum Shift. The information that I'm going to explain in this article is in reference to these processes which are going to impact life in Earth's environment on a global level very soon. There's very powerful evolutionary activity occurring right now with the evolution of consciousness, matter, energy, pressure and eternal love in space and time which involves frequency vibrations of consciousness, energy and thought that will soon begin affecting subatomic, atomic and molecular activity. The primary perspective of my work is explaining how we exist within an enormous, majestic, beautiful and powerful life form who's been described as "the universe" in scientific terms. The information in this article is also of an apocalyptic nature meaning a revealing or unveiling of information that could not be known apart

from the unveiling itself. I'm not referring to anything destructive because Earth is a life form who contains a very powerful consciousness and is going through evolutionary advancement right now and this activity is going to affect every living organism in Earth's environment with the introduction of this process. Human beings and other living organisms in our environment have been in a particular state of existence here with evolution which has prevented them from experiencing the true nature of living inside of another life form who contains a very powerful consciousness. The Shift in Consciousness is about the evolution and introduction with life in Earth's environment into the true nature of this life form we exist within which I describe as "Universal Consciousness" and the nature of Earth's evolution as well. I will explain why life here hasn't been able to access the rest of the activity contained within Universal Consciousness and Earth's consciousness.

I will explain how Universal Consciousness evolved into existence beginning at the most fundamental and quantum level and what occurred with this activity. This is important in order to understand the truth about the nature of death as well; and there's much more to this than what the human race has currently understood, and there really hasn't been very much information on this subject matter because of the resistance to evolution in Earth's environment which I will explain as well. In order to effectively clarify important information concerning this subject matter and help people understand what happened with the evolution of life and the experience and existence of death, I need to begin with what happened before the evolution of Universal Consciousness began with the introduction of matter as well. Universal Consciousness is an enormous, beautiful and powerful life form who contains a body of galaxies and is shaped in a spherical type nature similar to planets and stars. In the region of where the big bang happened and the evolution of matter took place it looks like where the top of a wine glass meets the stem and begins to transition downward just a bit. This is because as Universal Consciousness was being introduced into existence there was resistance to evolution that fought the initial process and some very powerful consciousness, matter, energy and pressure transferred back towards the source of introduction and birth. It's important that I describe this source in order to explain how death evolved into existence and what death is in reference to the evolution of consciousness.

Before Universal Consciousness existed there was consciousness, energy, pressure, eternal life and eternal love everywhere and this was existence. At the most fundamental and quantum level there are lower frequency vibrations and higher frequency vibrations contained within Infinite Consciousness. The vibrations themselves represent the existence and experience of thought and this is where thought originates from with the evolution of consciousness. Infinite Consciousness has always existed and this is where the source of eternal love comes from for the purpose of driving evolution everywhere. Evolutionary activity within Infinite Consciousness had been occurring on an infinite level and the lower frequency vibrations of consciousness, energy and thought had been continuously evolving into the higher frequency vibrations. Because the vibrations are different this causes an accumulation of pressure to occur within mainly the lower frequency vibrations and some of the higher frequency vibrations. The pressure had been responsible for expansion, acceleration and growth with Infinite Consciousness and had been assisting with the advancement of evolution. Nikola Tesla said "If you want to understand the mysteries of the universe think in terms of energy, frequency and vibration". This is what the Quantum Shift is about, which will impact life here and facilitate the Paradigm Shift which Thomas Kuhn discussed in his book *The Structure of Scientific Revolutions*.

The Paradigm Shift is going to change the entire scientific community globally and this has to do with the introduction of the Shift in Consciousness where the human race and other life forms in Earth's environment are completely introduced into the existence of Earth's consciousness, Universal Consciousness and Infinite Consciousness and life will advance here in a very significant way. On this fundamental level within Infinite Consciousness the lower frequency vibrations generated dark energy and the higher frequency vibrations generated light energy. Photons carry and distribute light energy in Universal Consciousness because matter requires light energy in order to experience evolution, but

because we exist within a life form light and dark energy are two different states of consciousness which drive the evolution of eternal love. Light and dark energy looked a lot different in Infinite Consciousness before Universal Consciousness evolved into existence because the evolution of matter took place and a body of galaxies developed with the evolution of the big bang. Light and dark energy are still states of consciousness and energy with frequency vibrations in Universal Consciousness but matter constantly evolves out of the higher and lower frequency vibrations and different degrees of pressure. A very important event occurred within these vibrations and pressure which prompted the beginning stages of the evolution of Universal Consciousness and this is also how death evolved into existence for the very first time.

Infinite Consciousness had been existing on an infinite level and had also been experiencing expansion, acceleration and growth into infinity. What happened was a point came within this activity due to continued expansion that the pressure contained within mostly the lower frequency vibrations of dark energy went through a powerful change. Because the frequency vibrations of consciousness, energy and thought had been expanding and accelerating infinitely, an experience of separation within mainly the lower frequency vibrations happened in a particular location and an increase in pressure occurred in this location for the very first time. This was actually evolution calling for the existence of more consciousness or a different form of consciousness in order to sustain the integrity of eternal life and eternal love. It was time for life to be born into Infinite Consciousness and an increase in pressure and experience of separation had to occur first within the frequency vibrations of consciousness, energy and thought. The reason an experience of separation had to happen is because Universal Consciousness as a life form had to assume an individual identity and perform a different role with the evolution of matter into existence for the very first time. This increase in pressure formed the beginning stages of the evolution of Universal Consciousness and this happened with the evolution of death into existence.

What happened was; when Infinite Consciousness felt this increase in pressure and experience of separation in this location for the very first time; Infinite Consciousness thought in almost an instant "am I dying"? This was because an experience of separation happened within the frequency vibrations of consciousness, energy and thought and this had never happened before. As soon as Infinite Consciousness thought that death was occurring; the element of death was introduced directly into this location. Infinite Consciousness wasn't dying but what happened was another form of consciousness or life form had to be introduced into existence in order for Infinite Consciousness to maintain the integrity of eternal life and eternal love forever because Infinite Consciousness had been existing forever and it was simply time for a powerful change to occur. Infinite Consciousness had to go through an experience of separation in thought first with this situation and this is how death was introduced. The existence of element of death was primarily introduced into the lower frequency vibrations of dark energy. This is why the experience of death in Earth's environment is mainly recognized in the consciousness in a moment that's associated with darkness or dark energy. What also happened in almost an instant with this event was the concept of non-existence was introduced directly into this location as well. This is because this was the first time this happened with Infinite Consciousness and the thought process of "am I dying"?, in almost an instant caused Infinite Consciousness who had been existing forever to produce the concept of non-existence as well. This isn't what was happening, it was the beginning stages of the evolution of Universal Consciousness but this happened very quickly and it was the first time that an experience of separation occurred within the dynamics of the evolution of Infinite Consciousness.

A positive charge of energy had always been contained within Infinite Consciousness and had been associated with eternal life. As soon as death was introduced into this particular location in Infinite Consciousness, it generated a very powerful negative charge of energy into this location and this is how the beginning stages of the evolution of Universal Consciousness took place with a positive and negative charge colliding together in a more powerful way than what had ever existed before, along with the increase in pressure as well. I want to explain something in reference to the evolution of death and the

powerful increase in the negative charge of energy that was introduced into this location of Infinite Consciousness. Earth is a life form who contains a very powerful consciousness. Electricity is contained within Earth's consciousness and environment and is a powerful concentration of activity on a global level. Electricity works on a subatomic level through the flow of electrons and electrons carry a negative charge of energy. If an individual grabbed a hold of the wires in just a household receptacle that contains 120 volts; that individual could easily go through the experience of death. This would happen because of introducing such a powerful negative charge of energy into the body from a powerful concentration of consciousness, energy and pressure contained within Earth's consciousness and environment. This is actually introducing the element of death from Earth's consciousness into the human body. This is why electricity can be very deadly.

Electricity is a primary aspect of Earth's consciousness that was harnessed by human beings from the evolution of Universal Consciousness transferring and evolving through Earth's consciousness, body and environment. This was so a more powerful increase in the evolution of consciousness could occur with life with the introduction of electricity into Earth's environment. When electricity was introduced there was already a positive charge of energy from the existence and evolution of life in Earth's environment and a much more powerful negative charge of energy was introduced into Earth's consciousness and this caused the evolutionary advancement of life in Earth's environment. Both a positive and negative charge in Earth's consciousness and environment became a lot more powerful globally and this accelerated the evolution of consciousness and life. Electricity in Earth's consciousness and environment represents the element of a powerful concentration of death in Earth's consciousness and body. Living organisms on a global level contain both life and death in their bodies and consciousness and eventually due to the resistance to evolution in the body and consciousness, the individual goes through the experience of death in the most powerful form with the experience of separation from Earth's environment and into the Whirlpool galaxy which I will explain. But, what happened with the beginning stages of the evolution of Universal Consciousness was an early developmental period began as eternal life collided together with the introduction of death into the location where there was a powerful increase in pressure due to continued expansion and acceleration with Infinite Consciousness.

I explain in my work the details on what happened with the early developmental period and the big bang. What happened with this process was the frequency vibrations of consciousness, energy and thought and pressure went through a powerful experience of separation in this moment and the evolution of matter transferred into the body of Universal Consciousness that began development. In the early developmental period what also began happening was the formation of the Higgs field. The Higgs field had to form because Universal Consciousness was evolving out of Infinite Consciousness and the existence of eternal life and eternal love. The Higgs field contains the foundation for eternal love in the body of galaxies and transfers back into Infinite Consciousness linking these two cosmic giants together. This is so a consistent flow of eternal love could continue to evolve from Infinite Consciousness into everything in Universal Consciousness and drive the evolution of consciousness, matter, energy, pressure and eternal life in space and time. Both life and death evolved into the body of galaxies as well and a very powerful concentration of both are located in this region of Universal Consciousness with planet Earth's evolution. There's also a very powerful concentration of resistance to evolution in this region because Earth is located very close to where the origin of the big bang happened. Life and Death contain different charges of energy and are incorporated into the existence and evolution of consciousness, matter, energy, pressure and eternal love in space and time. Living organisms in Earth's environment go through the experience of death because of the resistance to evolution in the body and consciousness of the individual where life is concerned in the form of restrictive or too expansive type pressure. What happens is the resistance to evolution causes the deterioration of the body and consciousness and this drives the evolution of death in the body and consciousness as well. When the individual reaches the final stages of life and the body and

consciousness shut down in Earth's environment what happens is the pressure is released from the body and the consciousness and identity of the individual life form evolves into a similar state that occurred when the beginning stages of the evolution of Universal Consciousness began with the original introduction of death into existence with the increase in pressure I discussed previously. This is because non-existence is only a concept and cannot happen to anyone, so the consciousness, identity, light energy and dark energy evolve directly into the Higgs field when death is experienced here.

This happens because death is contained within Infinite Consciousness, Universal Consciousness and Earth's consciousness and Earth's consciousness supports the evolution of life in the environment. When death occurs in the individual's body, the consciousness and identity of a living organism that's already been established through reproduction and evolution here is what causes the individual to evolve into the Higgs field at the moment that death occurs. Both life and death evolving into one another for the individual means that there is no more resistance to evolution so the individual can evolve through the Higgs field and transfer through the body of Universal Consciousness and evolve into different worlds contained within the Whirlpool galaxy which is commonly referred to as Heaven. The reason that Heaven is called "Heaven" is because the consciousness, identity and energy of the individual life form from Earth incorporates the element of death within every fiber of their being and they evolve through the Higgs field which contains the foundation for eternal love in Universal Consciousness. When they evolve into and arrive at their location up there they then remain eternal because they evolved and developed through the Higgs field and the Higgs field contains both Infinite Consciousness and the identity of Universal Consciousness. The reason that there's so much resistance to evolution here in Earth's environment with living organisms that varies upon species and individual existence is because life here doesn't understand the foundation for life itself or what happens with the experience of death and the evolution and transfer of consciousness into the Whirlpool galaxy. Also, because of this living organisms in Earth's environment contain the concept of non-existence in their bodies and consciousness that transferred into Universal Consciousness as a powerful form of resistance to evolution when the experience of separation occurred between Infinite Consciousness and Universal Consciousness as an individual identity was being established with Universal Consciousness and the evolution of matter took place out of the frequency vibrations of consciousness, energy and thought. The concept of non-existence is contained within the pressure within the frequency vibrations of consciousness, energy and thought in living organisms and stored as information. This resistance in the body of life forms here causes the Higgs field to repel away from the individual in a very powerful way and life here has about a 5 to 8 percent exchange of consciousness, energy and eternal love between themselves and the Higgs field. This is because the Higgs field contains the existence of Infinite Consciousness and eternal love. A living organism here contains the concept of non-existence in their bodies within the pressure between the frequency vibrations. This is what causes so much resistance to evolution between life forms and the Higgs field. Life here of course contains mass because of the Higgs field as discussed in physics. Mass is a fundamental property of existence, it's just there's more to the Higgs field than what's currently understood.

Scientists have proposed before that human beings only experience and observe about 5 percent of what's happening in the universe and this is the reason why. The evolution and introduction of the Shift in Consciousness is going to change all of this very soon because Heaven and Earth are evolving into one another through the advancement of evolution in the body of Universal Consciousness and a very powerful increase in eternal love here. This is happening because the Holy Trinity's consciousness is completely incorporated into the Higgs field and is advancing into Earth's consciousness and World Consciousness right now. This has been taking place through the experience of death with living organisms in Earth's environment. The reason is God, Jesus and the Holy Spirit have their consciousness, identity, eternal life, eternal love and their will incorporated into the Higgs field and Earth's consciousness as well. They represent complete, eternal and unconditional love for Earth and all life in

Earth's environment. I can explain with my work why everything happened here the way it did with the human race and religion and the Bible as well. This had to do with assisting with the evolution of consciousness and helping the resistance to evolution evolve. The Holy Spirit is evolving here now in a similar way than what Jesus went through and he's helping Earth's consciousness evolve and assisting with the evolution of Heaven and Earth becoming connected together through Universal Consciousness and the Higgs field. All of this information will be completely understood within the human race soon because eternal truth is evolving here with eternal life and eternal love. All life from Earth in the Whirlpool galaxy contains eternal life, the element of death; and eternal love. They also have their consciousness incorporated into the Holy Trinity's consciousness and existence. When a life form here goes through the experience of death and evolves and advances into the Higgs field what happens is more activity contained within the Whirlpool galaxy evolves here and more of the Holy Trinity's consciousness evolves here as well. This has been taking place here for a very long time and now it's almost time for the Shift in Consciousness to be introduced here and life will begin advancing with this process.

I will explain something else about living organisms in Earth's environment containing both life and death in different degrees. Earth evolved into the Milky Way galaxy around 4.5 billion years ago. Life evolved into Earth's consciousness and environment. Universal Consciousness supports the evolution of Earth's consciousness and environment. As life evolved into the environment so has the element of death in different degrees. Some species of life here contain more death in their bodies in the form of more dark energy and pressure. Remember that the frequency vibrations of consciousness and dark energy are lower and there was an increase in pressure for the very first time within Infinite Consciousness and the lower frequency vibrations that introduced the evolution of death into existence. These are species of life like Great White sharks, Cobra's, Black Mambas, Crocodiles, Irukandji jellyfish and different types of microorganisms like viruses. These living organisms contain a more powerful concentration of dark energy and death in their bodies and consciousness. This is why they can be very deadly to interact with in different ways. What's happening with the evolution of the Shift in Consciousness is the resistance to evolution in the form of restrictive or too expansive type pressure and the concept of non-existence being contained within the frequency vibrations in Earth's consciousness and environment and living organisms is in the process of evolving out of everything now as eternal love evolves into Earth from the evolutionary advancement of Universal Consciousness between here and the Whirlpool galaxy. Also the Holy Spirit has his consciousness incorporated into the Higgs field and is evolving here now. As his evolution becomes more powerful and is then publicly recognized what will happen is the introduction of the Shift in Consciousness will begin. Pressure has to be regulated properly and expand and accelerate within the frequency vibrations of consciousness, energy and thought or what happens is eternal love from the Higgs field has a difficult time evolving into subatomic, atomic and molecular activity. This also happened because the concept of non-existence transferred into subatomic, atomic and molecular activity as well. This restrictive or too expansive type pressure and the concept of non-existence has existed here for a very long time and this is what has generated resistance to the evolution of consciousness, matter, energy, pressure and eternal love in the environment. These types of pressure and this particular concept associated with resistance to evolution have been responsible for biological, physiological and psychological resistance in many different degrees in life here. The evolution of the Shift in Consciousness and the integration of activity contained within the Whirlpool galaxy, the Milky Way galaxy and Earth is approaching rapidly now and everything is going to begin changing soon. Everyone will know all of the details about this process soon. This is why I'm involved with this process and consistently work on the evolution of consciousness is to help people understand what's going to happen with the introduction of the Shift in Consciousness when very powerful and significant changes begin emerging.

Subject: [EXTERNAL] Attn: PCAST Members. Why the recent sensory deprivation experiments are being performed on baby monkeys. This information is in reference to the evolution of consciousness in Earth's environment. I appreciate your time and consideration very...

There was an article released by PETA on these experiments being done on baby monkeys. I explain why this is happening with human beings and human consciousness at Harvard. I really hope that you all have a chance to review this information. It will probably have a pretty powerful impact on you all.
Sean.

Hello PCAST Members,

I recently read an article in the media about scientific experiments being done on baby monkeys with sensory deprivation. You can't believe everything you hear in the news nowadays but I want to explain why this is trending in the media if it's true or not. I'm an author,, writer, researcher and do important work on the Shift in Consciousness, the Quantum Shift and the Paradigm Shift which Thomas Kuhn discussed in his book The Structure of Scientific Revolutions. My primary focus is on the evolution of consciousness, matter, energy, pressure and eternal love in space and time.

I had to give it a little bit of thought last night and this morning I understand why this is being discussed in the media or is actually happening in laboratory environments there at the University. This actually has to do with how life evolved into Earth's environment, what happened with the big bang and very powerful resistance to evolution. With my work i explain beginning from the most fundamental and quantum level how we all exist within an enormous, majestic, beautiful and powerful life form who's been described as "the universe". I explain in my work how the beginning stages of the evolution of what I describe as "Universal Consciousness" began within frequency vibrations of consciousness, energy and thought and different degrees of pressure. I also explain how Universal Consciousness went through an early developmental period before the introduction when an identity was established with the big bang.

I won't get into all of the specifics here but Universal Consciousness was born out of a much larger form of consciousness, energy, thought, pressure and eternal love which I describe as Infinite Consciousness. Before Universal Consciousness existed Infinite Consciousness was existence and was everywhere and had been evolving into infinity. This is where the source of eternal life and eternal love come from and there wasn't any subatomic activity yet; only frequency vibrations and pressure. Contained within Infinite Consciousness are lower frequency vibrations and higher frequency vibrations. The vibrations themselves represent the existence and experience of thought and this is where thought originates from in everything. Because the higher and lower frequency vibrations are different from one another, when they evolve into one another it causes pressure to accumulate within mostly the lower frequency vibrations and some of the higher frequency vibrations. The pressure is responsible for expansion, acceleration and growth.

This is still happening within Universal Consciousness and subatomic particles evolve out of these vibrations and different degrees of pressure at any given moment and location in space and time as evolution continues to move forward. The Higgs field permeates throughout Universal Consciousness and contains the foundation for eternal love and also contains a combination of Infinite Consciousness and the identity of Universal Consciousness. Human beings and other life forms in Earth's environment only interact with the Higgs field at about a 5 to 8 percent exchange of consciousness, energy and eternal love. This is because living organisms here don't understand the foundation for the existence of

life or what happens with the experience of death and the transfer of consciousness into another location in Universal Consciousness. Because of this fact human beings and other life forms here contain the concept of non-existence in their bodies and consciousness in a very powerful way and this generates very powerful resistance to evolution here with life.

This is why there's such a limited amount of interaction between living organisms and the Higgs field and why the aging process happens so quickly in Earth's environment. The concept of non-existence was introduced with the activity that occurred with the big bang. This is because Universal Consciousness as a life form was being introduced into existence for the very first time. It was also because matter in the form of subatomic particles evolved out of the frequency vibrations of consciousness, energy and thought for the very first time and a very powerful experience of separation occurred. There was eternal love contained within the process of the big bang and the formation of the Higgs field which represents the evolution of consciousness.

Then there was resistance to the evolution of consciousness as well represented by the concept of non-existence being introduced into existence with this process. It was an illusion that transferred into the body of galaxies and Universal Consciousness from the uncertainty associated with the evolution of life for the very first time and the experience of separation that subatomic particles went through from the frequency vibrations of consciousness, energy and thought. Consciousness evolved into subatomic, atomic and molecular activity as well but the moment that subatomic particles evolved into existence there was a very powerful experience of separation between the frequency vibrations of consciousness, energy and thought and the evolution of subatomic particles.

All of this activity has been evolving through Earth's consciousness and environment, World Consciousness and life contained within Earth's environment. Death isn't what human beings have thought either and is an integral part of the evolution of Earth and life in Earth's environment. Every living organism in Earth's environment who goes through the experience of death evolves directly into the Higgs field and advances into the Whirlpool galaxy which is about 30 million light years from Earth. The reason I mention all of this first is because there's activity contained within the bodies and consciousness of these individuals performing these experiments on monkeys. This has to do with the concept of non-existence being contained within the human body and human consciousness and how Homo sapiens evolved into Earth's environment.

When the Shift in Consciousness begins happening here and it will soon I promise, what's going to happen is the illusion of separation contained within Earth's environment with life is going to transfer out of everything completely. The resistance to evolution in human consciousness and other life forms is going to evolve out of everything completely as well. Let me explain what's happening now. Evolutionary advancement is happening with the frequency vibrations of consciousness, energy and thought and pressure right now and Universal Consciousness in this region and Earth's consciousness are evolving very quickly now. The activity contained within the Whirlpool galaxy and the Milky Way galaxy are evolving into one another and the experience of separation through the experience of death will end forever here soon. This is what is meant by "thy kingdom come thy will be done on Earth as it is in Heaven". This is about to begin materializing here soon.

Scientists aren't going to be able to see or detect this activity right now because they primarily focus on the behavior of matter and energy and begin at a subatomic level with the standard model of physics. They don't know about the frequency vibrations of consciousness, energy and thought and don't know that we exist within a life form who contains a very powerful consciousness known as Earth. They don't know that Universal Consciousness is a life form either and this life form 13.77 billion years later is evolving and is about to change forever. I will tell you this is that primates are the evolutionary link between human beings and the animal kingdom and their very, very important individuals. Eternal Love and eternal life have been involved in the evolution of life here and human beings and all of this information will become known soon as a revealing or unveiling of information that could not be known

apart from the unveiling itself will transfer into consciousness here globally as this process advances forward.

The scientists performing these experiments on baby monkeys are focusing on sensory deprivation. Sensory deprivation has to do with the element or concept of non-existence being contained within consciousness here. This situation up there, if it's really happening is powerful resistance to the evolution of the advancement of life in Earth's environment with the introduction of the Shift in Consciousness. Human beings evolved out of a certain species of primates and there was eternal love and very powerful divine sources also involved from another place in Universal Consciousness. This began happening a very long time ago here. Scientists believe completely in what's been described by Darwin with evolution. Darwin was correct and this scientific model is correct. But, there were also other factors involved with the evolution of life in Earth's environment that deal with divinity.

Both science and spiritual development were responsible for the evolution of life here. There's a statement being made in the scientists consciousness who's performing the process of sensory deprivation because Homo sapiens evolved out of primates. The illusion of separation generated by the concept of non-existence in the process of the evolution of consciousness here is being transferred from the consciousness of the scientists performing these experiments on to the baby monkeys who are unfortunately the recipients of this form of resistance to evolution. What's being said with these experiments is everything we thought we knew about life in Earth's environment and science is going to change soon and what we currently identify ourselves and our work with will be silenced with the beginning stages of this process that will happen I assure you. Science and human beings did exactly what they were supposed to do here and life had to exist like this for a long time in Earth's environment. But, the Paradigm Shift will happen here soon and science will undergo a revolutionary change. Even though these experiments are very harsh, everything works for the greater good of evolution and suffering is only temporary.

The baby monkeys being taken away from their mothers is a representation of the experience of separation contained within World Consciousness and human consciousness where reproductive activity and the uncertainty associated with the experience of death is concerned. Please understand that every living organism in Earth's environment evolves into the Whirlpool galaxy in a very powerful, wonderful and beautiful way and they all advance significantly and contain eternal love and eternal life forever. This is because they all evolve through the Higgs field and become an integral part of this primary field of consciousness, energy and eternal love forever. What's also happening with these experiments is the resistance to evolution is being represented in these scientists from the actual process that occurred when Homo sapiens evolved out of these primates and the primates that human beings evolved from began life as baby monkeys.

The concept of non-existence and the illusion of separation has been contained within living organisms and consciousness here since Earth evolved into this region of Universal Consciousness. There was powerful resistance to evolution when this happened with primates because some of Earth's consciousness experienced very powerful uncertainty associated with this transition. The uncertainty was "if this happens with primates and human beings are created life will cease to exist here". Look at what's happening right now with the threat of nuclear warfare activity. Let me tell you something; that cannot happen here okay. Earth and life in Earth's environment is protected completely. An individual can not create a nuclear war here because there are other very powerful divine forces at work here right now and Earth has a very powerful consciousness that's evolving. There's going to be a very big shock among political leaders if someone tries to do this I assure you.

This is why these experiments are being performed right now and these scientists have this type of resistance to evolution contained within primarily their subconscious energy and pressure in their bodies. Human consciousness is incorporated into and supported by Earth's consciousness. Earth's consciousness is incorporated into and supported by Universal Consciousness and Universal

Consciousness is contained within Infinite Consciousness and the Higgs field links these two cosmic giants together so a consistent flow of eternal love could keep evolving into the body of galaxies and life everywhere. Eternal Love is the most powerful form of energy in existence because love gives eternity a reason to exist. There's just been a very powerful experience of separation and the illusion of separation contained within Earth's consciousness and environment and human consciousness for a long time.

What's also happening with these experiments is the suffering that the baby monkeys are going through is not in vain. They're helping the concept of non-existence evolve here by going through this treatment because the evolution of Earth's consciousness and resistance to evolution transfers and evolves through living organisms. This is why this is happening right now is because the concept of non-existence from the evolution of Homo sapiens from primates is being represented in laboratory environments there at Harvard university. I understand that sensory deprivation isn't non-existence but being under these types of conditions an individual feels like their existence has been stripped away from them and sensory deprivation is the elimination of the senses. The reason that is working to the advantage of evolution is because the baby monkeys exist and feel like their somewhat in a state of non-existence as well. I don't recommend inflicting suffering upon beautiful life as a means to advance evolution, but suffering has happened here. Soon the entire human race will understand why suffering happened here and that it wasn't in vain either. Earth and life in Earth's environment is very, very important.

Love, Sean.
