Subject: [EXTERNAL] Arecibo Observatory

TO: Dr. Frances Arnold, Dr. Arati Prabhaker and Dr. Maria T. Zuber – Co-Chairs and all members of the PCAST Council

For the past 25 years, I have followed the critically important astronomical, planetary and atmospheric radar and radio science work of the Arecibo Observatory. My admiration is for both its iconic stature as a vital international research site, and as a vibrant educational science center for Puerto Rican students, graduate and post-doctoral students from around the world.

Subsequent to the 2020 collapse of the Observatory, this past October the NSF announced its plan to fund a \$5 million “world-class” center for STEM education and research on the Arecibo site. The following points concern me.

- * How would a “world-class” STEM education program be affective or attractive without the viable and accessible research equipment and world-class scientists on site?
- * Why discontinue the the working 12-metre radio antenna, the solar radio spectrometer and its Lidar system for continued atmospheric study?
- * Is it fiscally and scientifically wise to basically “scrap” over 60 years of Arecibo’s planetary defense mapping, climate change studies, space weather effects, radio astronomy contributions, national security findings, space exploration capabilities, and Arecibo’s history of making new discoveries?
- * The loss of Arecibo will have a devastating impact on the economy and recognition of this island and its support of scientific discovery and exploration. The Observatory has provided significant local employment, including STEM jobs, and has brought well deserved international acclaim for what was for 50+ years the largest radio telescope anywhere.

I encourage you contact the NSF and request them to re-consider their decision to eliminate the scientific mission and capabilities of the Arecibo Observatory, and to raise the issue with appropriate Representatives and Senators who can hold oversight hearings to question the rationale for this ill-advised and short-sighted decision.

Mary Ide

Subject: [EXTERNAL] Attn: PCAST Members. Where the existence of antimatter originates from. This information is associated with the Paradigm Shift and the Quantum Shift. If you have a few minutes to review this material I think you may find this interesting. I ...

Hello PCAST Members,

What I discuss in my work is in reference to the evolution of consciousness. My approach with my work is different because it's of an apocalyptic nature meaning; a revealing or unveiling of information that could not be known apart from the unveiling itself. Please try and keep an open mind while reading this and I assure you that if you digest the information in it's entirety you'll probably appreciate what I have to share. The scientific community and the human race is on the verge of experiencing a very powerful change or "shift" in reality here soon. My work is a reflection of the preliminary stages of this activity. The changes that will occur have to happen here because the experience of suffering in consciousness eventually has to end.

Thank you, Sean.

WHERE THE EXISTENCE OF
ANTIMATTER
ORIGINATES FROM
By: Sean McCleary

Antimatter comes from a particular form of activity that happened with the big bang. I use the term "Universal Consciousness" because we exist within a life form who contains a body of galaxies in a spherical type nature. Towards the area where the big bang happened there is a region where the body transitions downwardly similar to where the top of a wine glass meets the stem. The fabric of space-time are frequency vibrations of consciousness, energy and thought. This is how subatomic particles evolve into the body of galaxies. There are lower frequency vibrations and higher frequency vibrations of consciousness, energy and thought. This is the foundation for the evolution of consciousness within Universal Consciousness as a life form. Because the vibrations are different when they evolve into one another in galaxy formation and activity it causes pressure to accumulate within the frequency vibrations. Pressure is responsible for expansion, acceleration and growth.

We exist within an enormous, majestic, beautiful and powerful life form. Before Universal Consciousness existed there were these frequency vibrations of consciousness, energy and thought everywhere and this was existence. There was also eternal life and eternal love contained within the existence of consciousness and this is where the source of eternal life and eternal love come from. I use the term "Infinite Consciousness" to describe this form of consciousness. Infinite Consciousness is much larger than Universal Consciousness and gave birth to Universal Consciousness because the evolution of Universal Consciousness as a life form had to happen for specific reasons I discuss in my work.

All of this information will be revealed soon with the introduction of the Shift in Consciousness here in Earth's environment. This situation and event will be happening soon I

assure you. Earth is a life form who contains the existence and evolution of consciousness as well. When Universal Consciousness evolved into existence for the very first time with the big bang different forms of activity happened. Universal Consciousness had to assume an individual identity within the existence of Infinite Consciousness. Matter in the form of subatomic, atomic and molecular activity had to be introduced as well. What happened was subatomic particles evolved out of the frequency vibrations of consciousness, energy and thought with the evolution of the big bang for the very first time and consciousness had to evolve and transfer into subatomic particles out of the frequency vibrations of consciousness, energy and thought so the evolution of life could happen.

Universal Consciousness was the first life form introduced into existence. Subatomic particles serve as the foundation for the existence of matter. The foundation for the evolution of Universal Consciousness is eternal love and eternal life. This means that eternal life from Infinite Consciousness had to evolve into Universal Consciousness as an individual identity was established with the birth of Universal Consciousness as a life form. What also happened was resistance to evolution was introduced into the moment that the big bang happened. There was an early developmental period with Universal Consciousness before the big bang happened which I explain with my work.

There was a moment of transition with eternal life, eternal love and very, very powerful resistance to evolution as well. The resistance to evolution came from the experience of separation that was occurring as Universal Consciousness was evolving from the existence of Infinite Consciousness as an individual identity was being established as a life form for the very first time. This situation is very similar to what happens when a child is born here in Earth's environment. The child exists within the Mother for a period of usually 9 months. The child inside of the womb only knows existence as being contained within the mother and the womb and this is what provides comfort and nurturing. Then when contractions begin; the child has to be pushed out of the mother into Earth's environment for the very first time and doesn't understand what's happening with the process.

People don't understand this yet but this situation with early childhood development, pregnancy and the birthing process can generate different degrees of resistance to the evolution of consciousness in an individual which affects the consciousness throughout the course of the entire life of the individual. This is due to the experience of separation that the child goes through with the mother; and this experience of separation transfers into subconscious energy and pressure in the body of an individual. The early developmental period of Universal Consciousness produced very powerful resistance to evolution because life itself was being introduced for the very first time. Because life was being introduced for the first time out of Infinite Consciousness the resistance to evolution was introduced and transferred into existence as the concept of non-existence. This generated a very powerful illusion of separation in consciousness, matter, energy, pressure and eternal love in space and time. This affected the evolution of subatomic particles which evolved out of the frequency vibrations of consciousness, energy and thought for the very first time.

There was resistance to evolution associated with the experience of separation that Universal Consciousness went through from evolving out of the existence of Infinite Consciousness; and some of Universal Consciousness thought that a permanent separation was happening because an individual identity was being established with the evolution of life for the very first time. The foundation for the resistance to evolution was the concept of non-existence. The concept of non-existence came from some of Universal Consciousness

experiencing an illusion that a permanent separation from eternal life and eternal love was happening. This is because an individual identity had to be established with Universal Consciousness as a life form who performs a particular role with the evolution of matter and living organisms within the body of galaxies.

The concept of non-existence has been expressed and represented here in Earth's environment with living organisms associated with the experience of death. "Hey did you hear about what happened to so and so"? Yeah their dead now. This thought process exists on a global level in Earth's consciousness and environment. And actually no their not dead; they've been through the experience of death. They're alive and well in the Whirlpool galaxy which is commonly referred to as Heaven. Every living organism in Earth's environment who goes through the experience of death evolves directly into the Whirlpool galaxy from Earth's consciousness and environment. There is no Hell and I can explain why this concept was introduced into human consciousness.

What happens with the experience of death is the pressure and resistance to evolution beginning at the most fundamental and quantum level within the frequency vibrations of consciousness, energy and thought in the body and brain is released out of the body. This affects the evolution and existence of subatomic, atomic and molecular activity and the body shuts down completely. The evolution and existence of consciousness is happening everywhere with frequency vibrations of consciousness, energy and thought; and this is the fabric of space-time. The individuals consciousness, identity and energy evolves directly into the Higgs field. They accelerate very quickly through Universal Consciousness and evolve into different worlds contained within the Whirlpool galaxy. I can explain more important details about their arrival up there with my work.

The Higgs field contains the foundation for eternal life and eternal love within Universal Consciousness and permeates throughout the body of galaxies and transfers back into Infinite Consciousness. Eternal love consistently evolves from Infinite Consciousness; through the Higgs field and into the body of galaxies where planets and life contained within the environments of planets exist. There's been different degrees of resistance to evolution in different locations in Universal Consciousness. Earth is located very close to where the origin of the big bang happened. There's been a very powerful concentration of resistance to evolution in this region of Universal Consciousness. The concept of non-existence has been very, very powerful in this location. This concept has been evolving and advancing through living organisms in Earth's environment for a very long time. Earth has existed here in this region of Universal Consciousness so the concept of non-existence could change completely and evolve into the nature of existence through the evolution of consciousness and eternal love expressed within life here.

All life here is eternal and just goes through the experience of death. Love is eternal here, but the resistance to evolution has been very, very powerful in this region and this is why life has seemed very confusing, chaotic and painful at times. This is all about to change with the introduction of the Shift in Consciousness very soon. The reason I mention all of this information is because this is where antimatter comes from in the body of galaxies within Universal Consciousness. When the big bang happened the Higgs field was contained within this moment. The Higgs field also contains a combination of Infinite Consciousness and the identity of Universal Consciousness because Universal Consciousness evolved out of Infinite Consciousness and Infinte Consciousness is the source of eternal life and eternal love.

A field of consciousness, energy, eternal life and eternal love had to be represented in the body of galaxies in Universal Consciousness. This is so a consistent flow of eternal love and eternal life could continue evolving into the body of galaxies and living organisms in Universal Consciousness in order to sustain the evolution and integrity of life in different locations. The moment that the Higgs field made the transition with the big bang the concentration of eternal love; which is the most powerful form of energy in existence, affected the evolution of subatomic particles. The Higgs field gives mass to everything in Universal Consciousness because everything in Universal Consciousness evolved out of Infinite Consciousness and Infinite Consciousness contains the source of eternal life and eternal love.

There was different degrees of activity with frequency vibrations of consciousness, energy and thought along with pressure that affected the evolution of subatomic activity. On the opposite side of the spectrum of the foundation for eternal life with resistance to evolution there was the concept of non-existence being introduced into existence with the big bang from the illusion of separation that transferred into some of Universal Consciousness as the most powerful form of resistance to evolution. This is the most powerful form of the illusion of separation contained within the evolution of consciousness, energy and thought which transferred into the existence and evolution of matter. Antimatter comes from the concept of non-existence being contained within the evolution of matter.

As Universal Consciousness evolved into existence with the foundation for the existence of the body of galaxies and the first life form being eternal life and eternal love; there was an opposite form of activity contained within the body of Universal Consciousness as well in the form of non-existence which is only a concept but generated very powerful activity within the evolution of consciousness. This affected the evolution of matter and some matter evolved into existence with an opposite charge of energy than what matter contains. The concept of non-existence is very, very powerful on a global level in Earth's environment. Think about how many people don't believe in life after death. Think about people in the scientific community who believe that the human body is just a bunch of electrical signals and the brain is the only form of consciousness and once the brain dies life is over completely. Individuals in the scientific community who've believed this way have been helping the concept of non-existence evolve here in Earth's consciousness and environment in a very powerful way. Think about how many people use the term "Rest in Peace" with death.

Within human beings and human consciousness with the uncertainty associated with the experience of death there is a perception of eternal darkness. This perception is associated with the experience of death and isn't the case at all. This is an illusion. When human beings hear about someone going through the experience of death the concept of non-existence transfers into and through their bodies. A lot of people envision eternal darkness within their consciousness. All of this activity happens due to a lack of understanding in the nature of death. This is the concept of non-existence experiencing evolutionary activity within the human race and other living organisms in Earth's environment as well. All of this activity on a global level contains the existence and evolution of consciousness, matter, energy and pressure in space and time.

The reason that scientists haven't been able to detect much antimatter in the body of Universal Consciousness is because antimatter comes from the concept of non-existence and the resistance to evolution. Evolution continues to move forward and science doesn't understand the concept of non-existence and the evolution of consciousness like I've explained yet. All of the information I've explained is associated with the Paradigm Shift and the Quantum

Shift. This is why antimatter has been difficult to detect with scientific applications and equipment. Antimatter contains an opposite charge because the concept of non-existence and the resistance to evolution in this form represent an opposite type of activity than the existence of eternal life contained within the evolution of Universal Consciousness.

This resistance to evolution and concept contained within the evolution of consciousness affected the evolution of matter within the body of galaxies and antimatter was generated with an opposite charge of energy. There hasn't been as much antimatter in the body of galaxies because evolution is more powerful than the resistance and evolution continues to progress forward. The entire scientific industry is going to evolve and advance soon with the Quantum Shift and Paradigm Shift which Thomas Kuhn discussed in his book *The Structure of Scientific Revolutions*. This happens due to the emergence of the Shift in Consciousness.

Subject: RE: [EXTERNAL] Complication with Global Warming

The dangers of Global Warming, need for co-operation and an end to the present hostilities around the world are necessary as the present environment around the world of what appears could be the start of a world War has come to dire nature. If these developing conflicts do not resolve themselves before the end of next few year it will be too late.

The environment is in greater peril than you may think a hurricane of electrons that is forming at the north pole is causing pollution to be drawn to the north pole with it the heat to be drawn there as well. This at some point will cause an induced magnetic field that will initially increase the strength of the magnetic field. Overtime this will cause the oceans circulation patterns to change. This change will cause the southern hemisphere to isolate itself from the northern hemisphere and will then result in the same system in the northern hemisphere to occur in the south where-by a cold spot in the circulation pattern of the ocean will occur at the equator. This system will cause the magnetic field to shut down. When this occurs to the environment it will act as the in the Himalayas or on Mars where the seasonal changes will cause a similar effect as the sublimation of gas methane here on earth or Carbon Dioxide on Mars. The atmosphere in similar tact will begin a freeze thaw cycle that will generate static fields that will draw more and more oxygen from the equator towards both poles. This means the system will kill plant life and animal life as weather stagnates and draws more and more Oxygen away as plant life dies. This will quickly then turn into a super cooling event where gas is ripped away from the planet. There will be an increase in blights and bacterial overgrowth. This potentially killing ALL complex life and cause a return to primitive bacteria that thrived until the oxidation event occurred giving us our oxygen that allowed complex life to emerge.

This does not have to be the case if this emerging war stops and we start to co-operate with each other we can all survive. This will take seasonal production, massive efforts to replant the rain forest and cleanup of all contaminated area of the world. This could be paid for with carbon tax to have factory workers paid not to work in winter and to replant the rain forest as it act as its own water supply.

The environmentally damaged regions are necessary to be cleaned as these areas can act as accelerators of bacteria growth that can spread across the further environment making it difficult to grow plant life and causing further blights on plant life. This plastic eating bacteria for example that has emerged could also spread to other plastic to eventually run out to then suddenly jump to some other biology such as cows milk to cause a blight on these animal or harm some other life forms. The end result if nothing is done is either we suffocate or starve to death. This is a urgent matter for the president and I would urge you to advise him to take immediate action as above. You only need to push back the deadline until fusion is on line to my understanding somewhere between 2038 - 2042 if you make a plan to last at least 16 years there maybe a chance to stop what I would call a Great Filter event. We have to work together or we will most certainly all die.

I implore you to please advise the president of its urgency so were not all gone in a 100 or more likely in much less time.

Please understand the urgency
Sincerely Michael G. Cripps

Subject: [EXTERNAL] Attn: PCAST Members. The opioid crisis in the human race and the evolution of consciousness. The information contained within this material is associated with the Paradigm Shift and the Quantum Shift. I appreciate your time and consideration...

Hello PCAST Members, This article contains important information concerning the evolution of human consciousness and preliminary activity associated with a process known as the Shift in Consciousness. This situation is going to affect the entire scientific industry soon and generate powerful advancement in the human race as well. The opioid crisis has been affecting a lot of people and my work on the upcoming changes that the entire human race will experience is important. I send my work to you all because of who you are and the level of importance associated with PCAST. If you have a few minutes to review this material I think you may appreciate what I have to share. Thank you,
Sean McCleary.

THE OPIOID CRISIS IN THE HUMAN RACE AND THE EVOLUTION OF CONSCIOUSNESS .

By: Sean McCleary.

While streaming on my television at home I watched a documentary on a history of the opioid crisis. I'm going to elaborate with my work on what's happening with this situation in reference to the evolution of consciousness, matter, energy, pressure and eternal love here. The information contained within this article is in reference to the Shift in Consciousness, the Paradigm Shift and the Quantum Shift. The primary reason for the opioid crisis is human consciousness has been suffering here from the resistance to evolution and people haven't understood where the resistance to evolution comes from, but have a pretty good idea that fear affects the human body and consciousness. When people use opioids it generates a chemical reaction in the brain with opioid receptors and on a very powerful quantum level releases different degrees of pressure within the frequency vibrations of consciousness and energy.

The pressure on this level is where the origin of fear comes from in different degrees. I will explain something important. Beyond the subatomic level; where subatomic particles evolve out of are higher and lower frequency vibrations of consciousness, energy and thought. Because the frequency vibrations are different when they evolve into one another it causes pressure to accumulate within the vibrations. Pressure transfers more easily into the lower frequency vibrations. Because the vibrations themselves represent thought; when different degrees of pressure are introduced into the vibrations it causes an experience of separation in the vibrations in different ways.

Thought becoming separated in space and time is what causes consciousness to experience fear. Pressure can be stored at this level and be regulated experiencing expansion and acceleration as well. It's different types of activity with pressure and the type of information from the stimulus in Earth's environment which transfers into these areas and generates different variables of fear in the consciousness. This activity is incorporated into the fight or flight mechanism as well. Earth's consciousness and environment is very diverse and some people contain pressure in their brains and bodies which is more powerful in certain ways and produces more fear in the consciousness. This is

what's responsible for the experience of addiction in human beings. This type of fear also causes more suffering in the body and consciousness which is associated with addiction.

The use of opioids causes the individual to feel warm, peaceful and have a sense of well being and changes the way that the pressure behaves on this quantum level; which changes the activity contained within the frequency vibrations. This affects the perception of information contained on this level within the consciousness and alters the experience of reality with the individual. A lot of people experience this resistant type fear in their bodies and consciousness which produces different degrees of suffering in the body. The population has experienced an increase in opioid use and dependency. This is all resistance to the evolution of the Shift in Consciousness. The human race is a collective form of consciousness, matter, energy, pressure and eternal love on a global level. Love is eternal here because love is eternal everywhere within the body of galaxies and Universal Consciousness as a life form, and the foundation for eternal life and eternal love is contained within the Higgs field.

Human beings and other life forms here have about a 5 to 8 percent exchange of consciousness, energy and eternal love between themselves and the Higgs field. The reason that there's such a limited type of interaction is because living organisms here contain an incredible amount of resistance to evolution in their bodies. This comes from information that's stored within the frequency vibrations of consciousness, energy and thought and pressure on this level which affects the evolution of subatomic, atomic and molecular activity. The information that's stored primarily within the lower frequency vibrations and pressure is the concept of non-existence. This comes from living organisms here not understanding the foundation for the evolution of life or what happens with the experience of death. The concept of non-existence is contained within every living organism here in different degrees and produces the effect and resistance to evolution between themselves and the Higgs field.

What will happen with the evolution of the Shift in Consciousness here is eternal love and eternal peace will evolve into every life form here. This is because Universal Consciousness is a life form and is evolving between the Milky Way galaxy, Earth and the Whirlpool galaxy which is commonly referred to as Heaven. The level of activity in the Whirlpool galaxy which contains eternal love, eternal life and eternal peace is in the process of evolving through Universal Consciousness and into Earth's consciousness and World Consciousness now and will soon begin evolving and advancing into living organisms in Earth's environment. When this begins happening human beings and other life forms here won't feel any resistance to evolution anymore and the words mentioned in the Lord's Prayer, "thy kingdom come thy will be done on Earth as it is in Heaven", will manifest into and be achieved within life here.

A lot of people have been using opioids for a long time to alleviate different types of pain, suffering and resistant type fear in the body. The reason I mention the terms "resistant type fear" is because the human body stores an incredible amount of pressure on this quantum level which represents fear but it's only when the pressure causes resistance to the evolution of consciousness and eternal love here which generates an experience of separation and suffering in the body and consciousness. Pain medication has been very successful in different ways with helping human consciousness from the experience of suffering. The opioid crisis though has to do with resistance to evolution in human consciousness on a collective level.

The human race and human consciousness has been moving forward into the Shift in Consciousness and desiring an end to the suffering and the resistant type fear in the body. When the beginning stages of the Shift in Consciousness start happening it's going to be a very powerful experience for the human

race. As this process evolves into life here and the resistance to evolution collectively begins to evolve and transfer out of the human race and all life forms here what's going to happen is eternal life, eternal love and eternal peace will begin manifesting and evolving into living organisms everywhere. This is because the kingdom of Heaven will be achieved by the human race through the power of this process and Heaven and Earth are evolving into one another. Human beings won't experience anymore pain, suffering, resistant type fear or any resistance to evolution anymore. This is because the activity contained within the Higgs field will evolve into living organisms globally and the pressure contained within body on this quantum level will be regulated properly and perfectly from now on with this process.

The reason that opioids and human consciousness experienced a crisis is because human consciousness doesn't know or understand what the Shift in Consciousness actually means and why and how this is happening. Life is going to change forever here very soon and the human race is going through a very powerful experience of uncertainty right now. Earth's consciousness is supported by Universal Consciousness and human beings and other life forms here are incorporated into this activity, and people don't understand yet that we exist within an enormous, majestic, beautiful and powerful life form who's going through evolutionary advancement billions of years later and is going to change completely; affecting Earth's evolution and life here soon.

Even though the crisis has been painful, the resistance to evolution eventually works towards the evolution of consciousness because evolution is more powerful than the resistance. The fentanyl crisis is an example. The reason that fentanyl became so popular is because it's a much stronger opioid and there's more resistance to evolution in human consciousness now as the Shift in Consciousness and Earth's evolutionary advancement get more powerful. People have been manufacturing and using a more powerful opioid to eliminate pain, suffering and resistant type fear more quickly. Fentanyl is a much stronger opioid and it's manufactured by human consciousness and not Earth's environment like the poppy plant. Because the chemical itself is made by human beings, and human beings are experiencing an increase in resistance, it means that the chemical itself and the interaction on this quantum level within the frequency vibrations and pressure will contain more resistance to evolution.

The information in Earth's environment about fentanyl is that's it can cause human beings to go through the experience of death very quickly. This information is already established within the frequency vibrations of consciousness, energy and thought within the individual that's using the substance and human beings don't understand what happens with the experience of death. This produces more resistance to evolution on this level within the individual; therefore generating more resistance to evolution and an increase in the crisis. As fentanyl became more prevalent within the population of human beings more deaths occurred. The emergence of the Shift in Consciousness is getting closer now as Universal Consciousness and Earth's consciousness advance further with evolution.

The reason that the scientific community doesn't understand this activity yet or can't detect the progression of Earth's evolution or Universal Consciousness as a life form, is because this activity and process involves frequency vibrations of consciousness, energy and thought and different degrees of pressure along with the evolution of the Higgs field. What's going to happen soon as evolution increases in the frequency vibrations and more pressure changes on this level is it's going to affect the existence of the Higgs field and how this field interacts with life. As the process moves forward what's going to happen is subatomic activity will begin being affected because subatomic particles evolve out of the

frequency vibrations and pressure. The scientific community is governed by the standard model of physics, so they don't know this is happening right now.

This is why the Paradigm Shift occurs with the scientific community is because the introduction of the Shift in Consciousness affects the evolution of subatomic, atomic and molecular activity which will begin advancing scientific discipline into a completely different direction. The beginning stages of the Shift in Consciousness and Earth's evolutionary advancement represents the emergence of eternal life. What needs to happen in order for the beginning stages of the Shift in Consciousness to occur is both eternal life, the experience, consciousness and energy of death and eternal love all need to evolve into one another. The foundation for the resistance to the evolution of consciousness is the resistance in consciousness between the evolution of life into existence and the experience of death and transfer and evolution of consciousness because life contains a particular charge of energy and death contains a different charge of energy and both life and death are the two primary components which drive the evolution of consciousness.

The fentanyl crisis is all over the media because of the very powerful increase in people going through the experience of death. The resistance to evolution associated with fentanyl is causing people to go through the experience of death. When a human being or other life form in Earth's consciousness and environment goes through this process, the pressure and resistance to evolution is released from the body and their consciousness, identity and energy evolve directly into the Higgs field. This happens because resistance to evolution comes from different degrees of pressure on this quantum level and when the resistance to evolution is released it means that their consciousness is able to evolve into the Higgs field immediately after the body shuts down with death. When they evolve into the Higgs field they accelerate with the expansion, acceleration and growth of Universal Consciousness and transfer and evolve through Universal Consciousness and into the Whirlpool galaxy.

Powerful resistance to evolution from fentanyl has been causing a lot of people in the population to go through the experience of death. This means that a lot more consciousness has been evolving through Universal Consciousness between these two locations as the evolution of the Shift in Consciousness becomes more powerful. This has been causing the consciousness and energy of death in Earth's consciousness and environment to increase in evolution. The consciousness and energy of death here is incorporated into death contained within Universal Consciousness because both Earth and Universal Consciousness are life forms who contain the element of death. Human beings don't currently understand death and associate death with the concept of non-existence.

Soon the entire human race will understand the truth about the nature of death and the evolution of consciousness associated with this process. More people though going through this experience from the resistance to evolution associated with fentanyl use is causing death to evolve further into the existence of eternal life contained within Earth's consciousness and body, and Universal Consciousness as well. Life and death evolving into one another is generating more advancement in the Higgs field which contains the foundation for eternal love. Life and death have to evolve into one another in order for the Shift in Consciousness to take place as all of the resistance to evolution evolves out of Earth's environment and World Consciousness. More evolutionary activity is happening between here and Heaven with more people going through the experience of death and evolving into the Whirlpool galaxy. This is creating a powerful increase in evolution between these two locations because Heaven and Earth are evolving into one another.

The resistance to evolution from the opioid crisis has been driving consciousness into evolution even though the experience has been painful for people. A much different reality will begin emerging here soon as the evolution of the frequency vibrations of consciousness, energy and thought increase with the evolution of eternal love. This will begin affecting subatomic evolution and the beginning stages of a very powerful change in scientific discipline will take place soon. The suffering contained within the human race will also soon be a distant memory as the experience of a new birth begins for Earth and all of the inhabitants here. The evolution of the Shift in Consciousness is the salvation for this painful global epidemic.

Sean McCleary.

Subject: [EXTERNAL] Attn: PCAST Members. The origin of activity which generated the existence of the Fermi bubbles. This discovery I've just made is important in reference to the advancement of scientific discipline. I appreciate your time and consideration ver...

Hello PCAST Members,

I just saw the article which scientists explain why the Fermi bubbles are contained around the Milky Way galaxy. I understand that certain conclusions are established in science with the behavior of matter and energy and this has to do with the standard model of physics and the current state of scientific discipline here. My conclusion on this subject matter is in reference to the evolution of consciousness which is contained on the most fundamental and quantum level in the body of an enormous, majestic, beautiful and powerful life form who's been described as "the universe". At this level there are lower and higher frequency vibrations of consciousness, energy and thought along with different degrees of pressure which consciousness evolves and transfers through. This is what subatomic activity evolves from in the body of galaxies. I explain what caused the Fermi bubbles to form around the Milky Way galaxy in reference to the body of what I describe as "Universal Consciousness". I know a lot of scientists are opposed to this term but please review my explanation and I think you will appreciate what I have to say. The evolution of consciousness works in accordance with the behavior of matter and energy for the purpose of helping life evolve and advance.

With my work on the evolution of consciousness, matter, energy, pressure and eternal love and the Shift in Consciousness, the Quantum Shift and the Paradigm Shift I understand where the Fermi bubbles originate from with the evolution of consciousness. The explanation provided by Dr. Yutaka Fujita sounds like it could be correct. With my work on the evolution of consciousness I'm almost positive that I understand the nature of these bubbles as well. They have to do with the shape of the body of Universal Consciousness. Universal Consciousness contains a body of galaxies and maintains a spherical type shape similar to stars and planets. Towards the region where the big bang happened though there is an area of the body which transitions downwardly somewhat like where the bottom of a wine glass meets the stem. This happened due to the resistance to evolution as the early developmental period was moving into the stage of the evolution of the big bang.

When the big bang happened there was very powerful resistance to evolution contained within the early developmental stage that caused the evolution of consciousness to transition back in the opposite direction as the first individual life form was being introduced and established in existence. Universal Consciousness is an enormous, majestic, beautiful and powerful life form who contains the existence and evolution of consciousness everywhere. Human beings haven't had very much accessibility to the evolution of consciousness in Earth's body and the body of Universal Consciousness. This is because life in Earth's environment doesn't understand the foundation for the existence and evolution of life here or what happens with the experience of death and the evolution of consciousness into another location. A lot of people associate death with non-existence and non-existence is only a concept and not a reality.

This concept is what has caused such a powerful experience of separation in living organisms here and the existence of consciousness contained everywhere else. The Milky Way galaxy and Earth's existence are very, very important because this is the reference point for the

beginning stages of the Shift in Consciousness and Earth's evolutionary advancement. This had to be the location where everything begins changing forever and Universal Consciousness as a life form begins to advance with evolution after almost 13.8 billion years of existing. It's because Earth and life in Earth's environment exists close to the region where the transition occurs and where the big bang happened.

The reason that life in Earth's environment had to evolve without any outside influence or distraction is because life here had to evolve in a natural way similar to what happened with the beginning stages of the development of Universal Consciousness. This was so the evolution of consciousness and the evolution of love could happen naturally and effect the area of activity in this region of Universal Consciousness and evolution could advance forward. The consciousness of the entire body of Universal Consciousness around the outside of the body where Universal Consciousness meets Infinite Consciousness has been evolving around the Milky Way galaxy. Because Earth and the Milky Way galaxy represent the evolutionary advancement of Universal Consciousness entirely after almost 13.8 billion years of existing what's been happening for a long time now is consciousness from around the entire body of Universal Consciousness has been transferring around the Milky Way galaxy as a form of protection and concealment. It's similar to the structure of a womb in the body of a female with reproductive activity.

This is happening because the early developmental period that Universal Consciousness went through before the big bang is being recreated again with the process of the Shift in Consciousness. I'm going to mention this topic and I'm not referring to religion or the Bible okay. The Holy Spirit's consciousness is evolving here in Earth's environment right now and has been for a little while now. I'm referring to only the evolution of eternal life and eternal love to help life here advance in a very powerful and wonderful direction with the process of the Shift in Consciousness. Evolution itself has been causing the Fermi bubbles to form around the Milky Way galaxy and physicists understand how matter, energy and pressure have been affected by this process. I understand with my work on the evolution of consciousness how these bubbles formed.

Universal Consciousness as a life form with a spherical type nature is contained within Infinite Consciousness. Infinite Consciousness has always existed and on the most powerful quantum level has contained different frequency vibrations of consciousness, energy and thought and different degrees of pressure. Infinite Consciousness also contains the source of eternal life and eternal love. Matter in the form of subatomic, atomic and molecular activity was introduced through evolution with the big bang and the birth of Universal Consciousness. Over a long period of time what's been happening is consciousness contained within Infinite Consciousness and the body of Universal Consciousness around the outside knew that a very powerful and primary change was going to occur with evolution changing everything in the location of the Milky Way galaxy and Earth's existence. Infinite Consciousness and Universal Consciousness knew that the Holy Spirit would introduce eternal life and eternal love into this location and the Shift in Consciousness would occur as well.

This information had already been contained within Infinite Consciousness because of the nature of the existence of Infinite Consciousness. The body of Universal Consciousness has contained resistance to evolution in different degrees and different locations. The resistance to evolution has been very heavily concentrated in this region of the body due to the concept of non-existence being so powerful in this location. Over a long period of time the evolution of consciousness has been transferring energy and thought towards the Milky Way galaxy and

Earth's location because Infinite Consciousness knew what was going to happen here and Universal Consciousness has been affected by this activity as well.

The Fermi bubbles represent the evolution of consciousness around the Milky Way galaxy which has affected the behavior of matter and energy in reference to the standard model of physics and cosmology model where physicists could detect, observe and understand what these bubbles represent. These bubbles are also an extension of what happened with the early developmental period before Universal Consciousness went through the experience of the big bang and an individual identity was established with the evolution of matter. The activity contained within the frequency vibrations of consciousness, energy and thought has been evolving into subatomic, atomic and molecular activity and these bubbles formed around the Milky Way galaxy.

They are a result of the spherical type nature and body of Universal Consciousness transferring thought towards the Milky Way galaxy through the frequency vibrations and pressure contained within the body of Universal Consciousness and this type of activity on this quantum level evolved into the behavior of matter and energy and a bubble formed because Universal Consciousness is going to evolve all over again. This is because the Holy Spirit's consciousness is evolving here with eternal life and eternal love and the Shift in Consciousness is going to happen soon. Please remember when I mention the Holy Spirit in my work I'm referring to eternal life, eternal love, eternal peace and eternal truth and that's the nature of this consciousness that's going to affect life here forever soon.
Sean McCleary.
