

Energy and Transportation

Building a Future Where Everyone Can Ride and Drive Electric

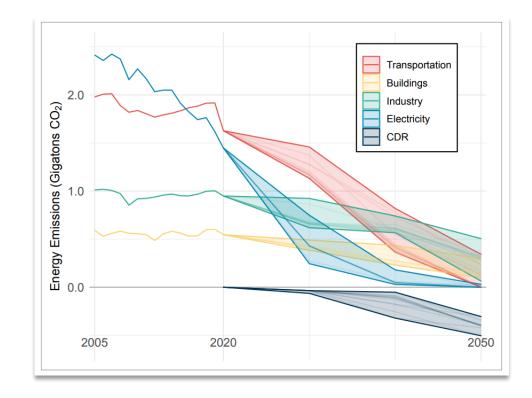

Rachael Nealer, PhD

PCAST September 12, 2024

driveelectric.gov

This is the **biggest** change to our transportation system in a century – and we are right in the middle of it.

Source: U.S Department of State and Executive Office of the President November 2021

Numerous strategies and solutions are required to tackle transportation emissions

Convenient

Travel Demand Manageme Active Mobility

Pool Riding

Telework E-Commerce

┢

Clean

Improve Community Design and Land-use Planning Increase Options to Travel More Efficiently Transition to Zero Emission Vehicles and Fuels

Figure A. Summary of transportation decarbonization strategies.

1 icon represents limited long-term opportunity 2 icons represents large long-term opportunity 3 icons represents greatest long-term opportunity 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1 1	BATTERY/ELECTRIC	(©) HYDROGEN	SUSTAINABLE LIQUID FUELS
Light Duty Vehicles (49%)*		-	TBD
Medium, Short-Haul Heavy Trucks & Buses (~14%)		۲	đ
Long-Haul Heavy Trucks (~7%)		000	
Off-road (10%)		٢	
Rail (2%)		00	66
Maritime (3%)		(a)	666
Aviation (11%)		۲	
Pipelines (4%)		TBD	TBD
Additional Opportunities	 Stationary battery use Grid support (managed EV charging) 	Heavy industries Grid support Feedstock for chemicals and fuels	 Decarbonize plastics/chemicals Bio-products
RD&D Priorities	National battery strategy Charging infrastructure Grid integration Battery recycling	Electrolyzer costs Fuel cell durability and cost Clean hydrogen infrastructure	Multiple cost-effective drop-in sustainable fuels Reduce ethanol carbon intensity Bioenergy scale-up
* All emissions shares are for 2019 * Includes hydrogen for ammonia and methanol			ia and methanol

Figure 7. Summary of vehicle improvement strategies and technology solutions for different travel modes that are needed to reach a netzero economy in 2050 (more details provided in Section 5).

Source: U.S. National Blueprint for Transportation Decarbonization

The goal is a national network

How do we connect regions? The nation?

Ohio, New York, Pennsylvania, Hawaii, Maine, Vermont, Utah, and Rhode Island NEVI stations are open!

ME

HI

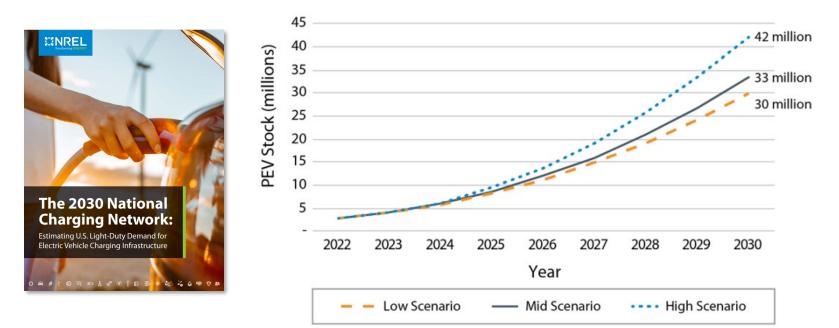

PA

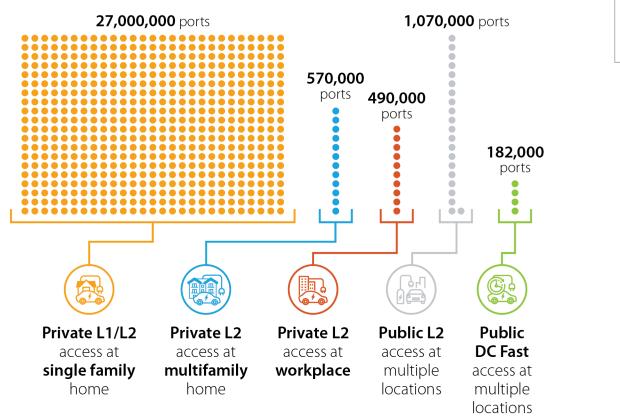

U.S. national light-duty PEV stock under three adoption scenarios

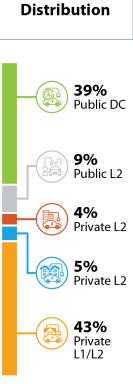

U.S. PEV Adoption Scenarios (light-duty)

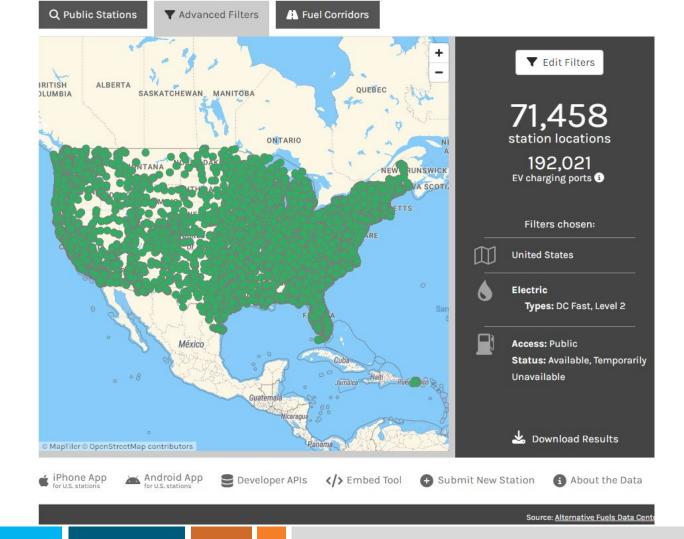

National EV Charging Network Size Each ● represents 50,000 charging ports

Relative Capital Cost

F

Success = Achieving a national charging network that embodies foundational principles:

(and creates jobs, supports EV adoption, and reduces transportation emissions)

Convenient

Great customer experience

Affordable

• Open market that fosters competition and innovation

Reliable

- Works every time
- Foundations for vehicle-grid integration

Equitable

• Any driver, any EV, anywhere

Joint Office of Energy and Transportation

Thank You
